

THE +AI ACCOUNTABILITY MARK

+AI = AI helped. I take responsibility.

The **+AI Accountability Mark** is a situational responsibility post-nominal notation designed to declare that while a work was materially assisted by artificial intelligence, a human or organization accepts **full and absolute accountability** for the output. It acts as a standardized declaration of involvement rather than a measure of AI content volume, serving as a trust layer for creators and organizations in the generative technology era.

SPECIFICATION STATUS	VERSION	CANONICAL MARK	PROJECT FOUNDER
Draft Specification	Version 0.1	+AI	Eric Maurant / JAPER

THREE CORE PRINCIPLES OF THE SPECIFICATION

01. AI Participated AI materially helped to create, analyse, transform, or present the work. The mark is an accountability declaration, not an authorship claim. It indicates material influence rather than specific proportions.	02. A Human Chose An identifiable person or organisation knowingly adopted and released the result. A human makes a conscious decision to stand behind the output, ensuring a trace of human agency and final authorization.	03. Responsibility Stays Human The releasing party does not transfer accountability to an AI system or its provider. Humans remain fully responsible for the work. Blame cannot be shifted to the tools or technology provider for any errors.

THE GREATER PROJECT CONTEXT & GLOBAL ECOSYSTEM

The **+AI Accountability Mark** project includes a complete ecosystem that extends beyond the three core principles. At its heart, the project aims to build a global 'trust layer' for modern creators by standardizing how machine assistance is acknowledged. The repository contains the canonical specification (consisting of 26 normative sections) translated into **40 languages** via a validation toolchain and a translation suite.

To facilitate wider adoption and explore diverse aesthetic designs, the repository hosts **80 single-file presentations**. These include a variety of themed visual variants and re-skins (e.g. sci-fi themes, industrial studies, and tool/documentation standards). The platform is completely self-contained and serves as a static website with zero external build requirements or complex servers, making the tool accessible and open to anyone worldwide.

HOW TO IMPLEMENT THE MARK: Add **+AI** as a post-nominal directly to your name, work, or release. Link the characters to <https://plus-artificial-intelligence.org> or reference the standard in your documentation. Example: *Jane Doe, +AI* — signifying 'AI helped. I take responsibility.' to your audience.
